

Risk Identification	Risk Type	Causes	Likelihood	Severity	How to Avoid Risk (planning)	How to Monitor Risk
Falling Behind Schedule	People/Estimation	<ul style="list-style-type: none"> Not updating group members on progress Spending too long on certain tasks Devoting too much time to research/planning 	High	High	<ol style="list-style-type: none"> Regular meetings Contingency plans Checklists Share realistic completion dates Change schedule when necessary 	<ol style="list-style-type: none"> Update group members on progress Count how many times the schedule has had to be changed
Software Becomes Inadequate for Project	Technology	<ul style="list-style-type: none"> Improper assessment of software requirements Unexpected update/change in software 	Moderate	High	<ol style="list-style-type: none"> Keep list of alternatives Thorough research of software choice 	<ol style="list-style-type: none"> Check changes within software updates
Failure for Group to Work Congruently Towards Tasks	People	<ul style="list-style-type: none"> Not updating groups members on progress Not working on tasks together within small groups 	Moderate	Moderate	<ol style="list-style-type: none"> Regular meetings Timetabled hours to perform tasks together 	<ol style="list-style-type: none"> Track group meeting attendance

Forgetting About Smaller Tasks	People	<ul style="list-style-type: none"> Not following PERT chart Thinking of them as insignificant 	Low	Low	<ol style="list-style-type: none"> Follow PERT chat Give each person their own task 	<ol style="list-style-type: none"> Checking checklist for number of incomplete tasks
Inflexible Implementation of Street Names, Cards etc	Requirement	<ul style="list-style-type: none"> Narrow minded planning/design 	Low	High	<ol style="list-style-type: none"> Make it a topic at the next meeting Assess software options based on group's prior knowledge 	<ol style="list-style-type: none"> Keep list of tasks with undecided methods of completion
Sudden Growth in Requirements	Requirement	<ul style="list-style-type: none"> Not identifying parts which should be flexible Not planning on how they could be made flexible 	Moderate	High	<ol style="list-style-type: none"> Careful planning 	<ol style="list-style-type: none"> Multiple people should test code for flexibility
Improper Designs for Code/UI/	Planning	<ul style="list-style-type: none"> Neglection of planning stage Unrealistic design 	Moderate	Low	<ol style="list-style-type: none"> Coders review design plans 	<ol style="list-style-type: none"> Always share design ideas with people who will implement it

Incorrect Interpretation of Specification	Requirement	<ul style="list-style-type: none"> Failure to agree as a group what certain phrases mean Failure to use the same interpretation of the specification 	Moderate	High	<ol style="list-style-type: none"> Create clearer version of specification Ask Watson Games for clarification 	<ol style="list-style-type: none"> Group reviews of group members tasks
Absence of Team Members	People	<ul style="list-style-type: none"> Team members falling ill Conflicting priorities of team members Team members dropping out from the project 	Low	High	<ol style="list-style-type: none"> Ensure collaboration of tasks to share knowledge Ensure team members provide advanced notice of absence 	<ol style="list-style-type: none"> Review progress at weekly meeting
Unnecessary Addition of Extra Features	Requirement	<ul style="list-style-type: none"> Failure to adhere to set of requirements Misinterpreting user requests 	Moderate	Low	<ol style="list-style-type: none"> Produce a clear set of requirements Comply with mandatory requirements first and foremost 	<ol style="list-style-type: none"> Discuss relevance & time cost of extra features at team meetings

Game Breaking Bugs	Planning	<ul style="list-style-type: none"> Poor/unsophisticated code Inadequate low-level design 	Moderate	High	<ol style="list-style-type: none"> Identify the most severe bugs during the test phase Leave sufficient time to fix bugs Document software 	<ol style="list-style-type: none"> Document bugs during testing
Code That's Difficult to Use and Maintain	Maintenance	<ul style="list-style-type: none"> Inadequate documentation of software Suitable low-level design 	Low	High	<ol style="list-style-type: none"> Use pair programming to ensure readable code Utilise Javadoc appropriately 	<ol style="list-style-type: none"> Review code on a constant basis
Inadequate Performance	Requirement	<ul style="list-style-type: none"> Inefficient code Poor choice of software Inadequate design 	Low	Moderate	<ol style="list-style-type: none"> Investigate the use of multithreading Detailed low-level design 	<ol style="list-style-type: none"> Rigorous system level testing
